Mobile App

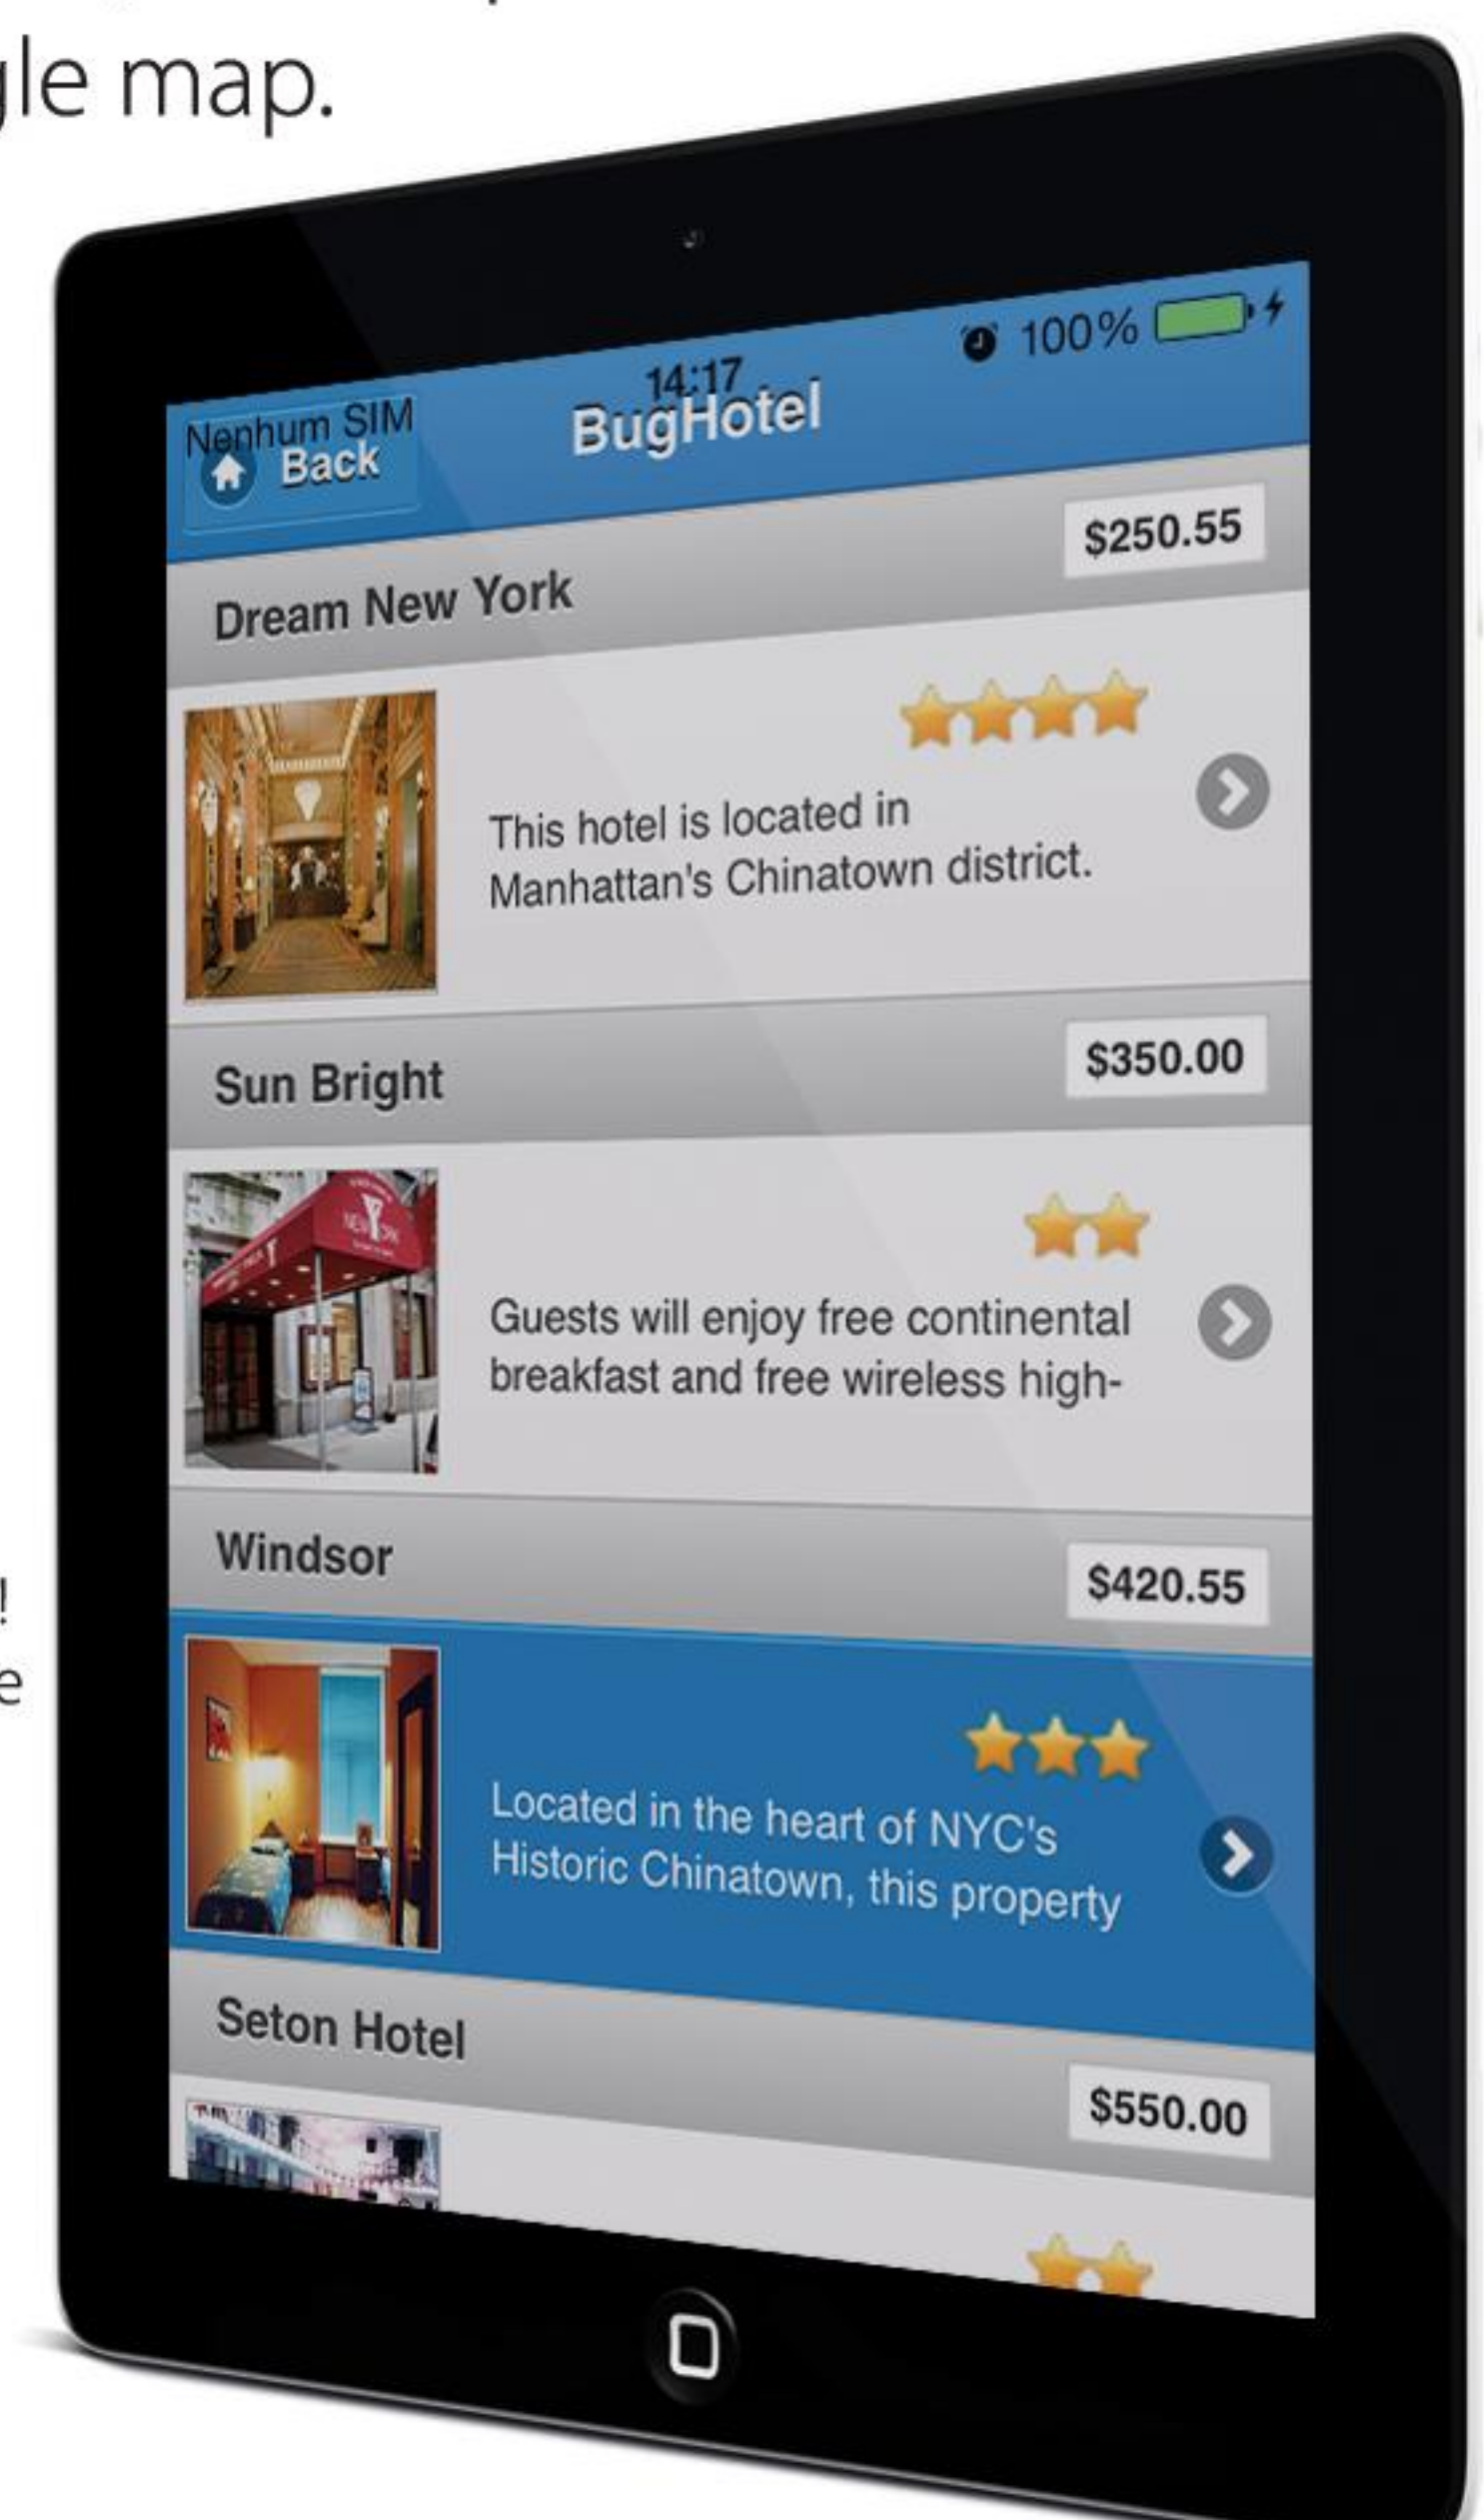

Make it possible!

Mobile technology is really expected to be growing in significance for travel companies across the globe. Bug Software Mobile Apps are synchronized with back office system of BugHotel Reservation System where you can control bookings through various platforms such as iPhone, Blackberry and Android.

Mobile travel management!

Bug Software makes sure that you are available wherever and whenever your guests wish to book online using their devices, supporting all major mobile devices, including iOS (iPhone & iPad), Android, Blackberry, and Windows Phones.

BugHotel Reservation System Mobile App provides extensive functionality: you can book rooms; filter the results by price, number of stars and board type. The app offers an extensive description of every hotel, a list of facilities, several photos and the hotel's location on a Google map.
